

BASKI – Basic Skills Training Model

Dear Reader,

The BASKI project has reached its final stage, so it is time for an overview about the most important activities and products of the project BASKI as well as plans for the further valorization of these products after the project running phase and of experience gained by the partners. Results of the project show that needs for care and education of people with mental and multiple disabilities – the main target group of BASKI – in order to achieve basic skills helping them to act require in all European countries sustainable projects results and activities. The BASKI project partners would like to contribute to this aspect. Also education and social institutions with predominantly work with people with disabilities can be supported in their organisation and change processes by the results of the BASKI project.

The BASKI project partnership consisting of eight partners and one extern expert from six countries worked very cooperatively during a three years project phase.

The developed **BASKI Training Model** offers:

- social and individual competence training for people with mental and multiple disabilities in small groups being supported by a trainer (BASKI Training)
- qualification programmes for professionals in the social, educational and or psychological sector (Train the Trainer, European Counsellor)
- professional support for trainers and institutions in disability sector as well as accompanying them in the creation of infrastructures which support all involved persons (BASKI Coaching).

Presentations

[BASKI Flyer](#)

Presentations at conferences and special fairs.

Evaluation Reports (http://www.basic-skills-training.org/baski_download.htm)

Project meetings which took place in:

Graz, October 2005

Budapest, September 2006

Athen, June 2007

Gelsenkirchen, May 2008

Dissemination and valorisation activities to assure sustainability of the results of BASKI project:

In all partner countries the project was introduced in the partner institutions and also within municipalities and different organizations.

The BASKI project has a presentation on the Web-sites of the partners in their own languages.

The BASKI project results have been presented in Brussels at meetings with GRUNDTVIG coordinators, were appreciated by the European Commission as good practices and published in a Socrates project catalogue.

The project team discussed how to continue to use the BASKI Model within own organisations and how to valorise it after the project period.

In Austria the BASKI Model will be implemented at Lebenshilfe GUV as a service for all departments under the name of "*SeMi-Vision*". Twenty training groups and according coaching offers are planned.

It is going to organize an educational programme "Train the Trainer" and "European Counsellor" for interested professionals in the psycho social field in the region of Graz and surrounding area. Additionally to these trainings Lebenshilfe GUV wants to offer the BASKI Educational Programme for international participants as well. They therefore want to publish the BASKI Educational Programme under the Grundtvig Training Database to offer the training as an IS-Training for a European audience.

A meeting is planned in autumn 2008 in Graz to discuss with other organizations from Austria about the dissemination of results of the project.

Lebenshilfe GUV is a member of EASPD and we are cooperating with Inclusion Europe - we will ask for support to disseminate the BASKI project and its results in their member organisations all over Europe.

For Hermes and DIA-Sport the implementation of BASKI was very successful. Because in Bulgaria and Greece there is a high interest of trainers and organisations in continuing to work and further implement BASKI principles the partners look for a financial support in both countries to continue valorisation activities.

Hermes plans to offer the BASKI Educational Programme to all of their staff members.

One of the research groups of the IAT refers innovative health services and they organize different workshops and presentations where the results of BASKI project will be presented. It is intended to organize training sessions for people with disabilities and trainers by using BASKI Curricula and the Handbook at two German institutions specialized in disabled care (Werkstätte für Behinderte in Gelsenkirchen and Bochum).

IAT would like to disseminate BASKI results also in other European countries non-member of the BASKI project team. The first activity will be at a special fair for disabled in Bucharest, Romania.

All BASKI project partners would like to participate in a dissemination project next year. IAT would like to coordinate it and to include also new partners from Europe and abroad.
